# Early prediction of lifestyle diseases

## Idea:-

Today's situation is that the people are not aware of the current diseases and their solution, the middle-class people have not budged to show the normal disease to the doctor.   They avoid these fear diseases and later this disease case big. there are many free camps but anyone does not convey to these simple living people a large number of people avoid these camps because they have not correct information about it .they are not sure to trust on them. some people go camping they fear to say what they happen, for example, they shame these problems like if they have loose motion or any other problem.

So my idea is to create a web application to show the current disease and his safety stips and the procation and also people post the question and also doctor reply it.

## Problem definition:-

In this platform, the people and doctors are joined to this platform and they are registered login logout and also they have early known that what is happened in their area and the true information is given to this platform.  About the disease which is a large amount of spearing in this area first of all the people see and their area which diseases is spread, also in bottom, and also give what the precaution do for the disease not come, also if you have any other disease then also have a chatbox to say your problem there was the best MD graduated doctor, and they convey you to what to do for these diseases .and also doctors joined this platform as a sub-admin. They solve the people's posted questions, and also add current disease information and safety tips and what precaution we do for these diseases and also known about these doctors who give this information. Admin doctor verifies this doctor's added information and verify the doctor's status and manages the site settings.
